

Earlier, we learned how to create ColdFusion API’s with the native support ColdFusion offers. Login to your ColdFusion administrator.

Quick review to ensure that we have enabled and have an active set of REST API’s available. The image to the right should be sufficient to verify the active set of services in your administrator.

MANUAL CREATION

Adobe API Manager – Import REST from ColdFusion

Active ColdFusion REST Services

Actions	Root Path	Service Mapping	Default	Host:Port
  	C:\ColdFusion2021\cfusion\wwwroot\webservices	api	NO	

Update REST Path

rest

Change this settings to get customized URL. For example, if you change this setting to 'comservices', URL would look like http://{Hostname}:{Port}/comservices/{ServiceMapping}/{Resource REST Path}

Update REST Path
