

SWAGGER CREATION

Adobe API Manager – Swagger

01

The Adobe API Manager is currently using version 2.0 of Swagger. This is very important for several reasons. There are significant structural differences between different versions of Swagger.

02

We will use the following sample code to test out the Swagger import process for creating REST API's in the Adobe API Manager.

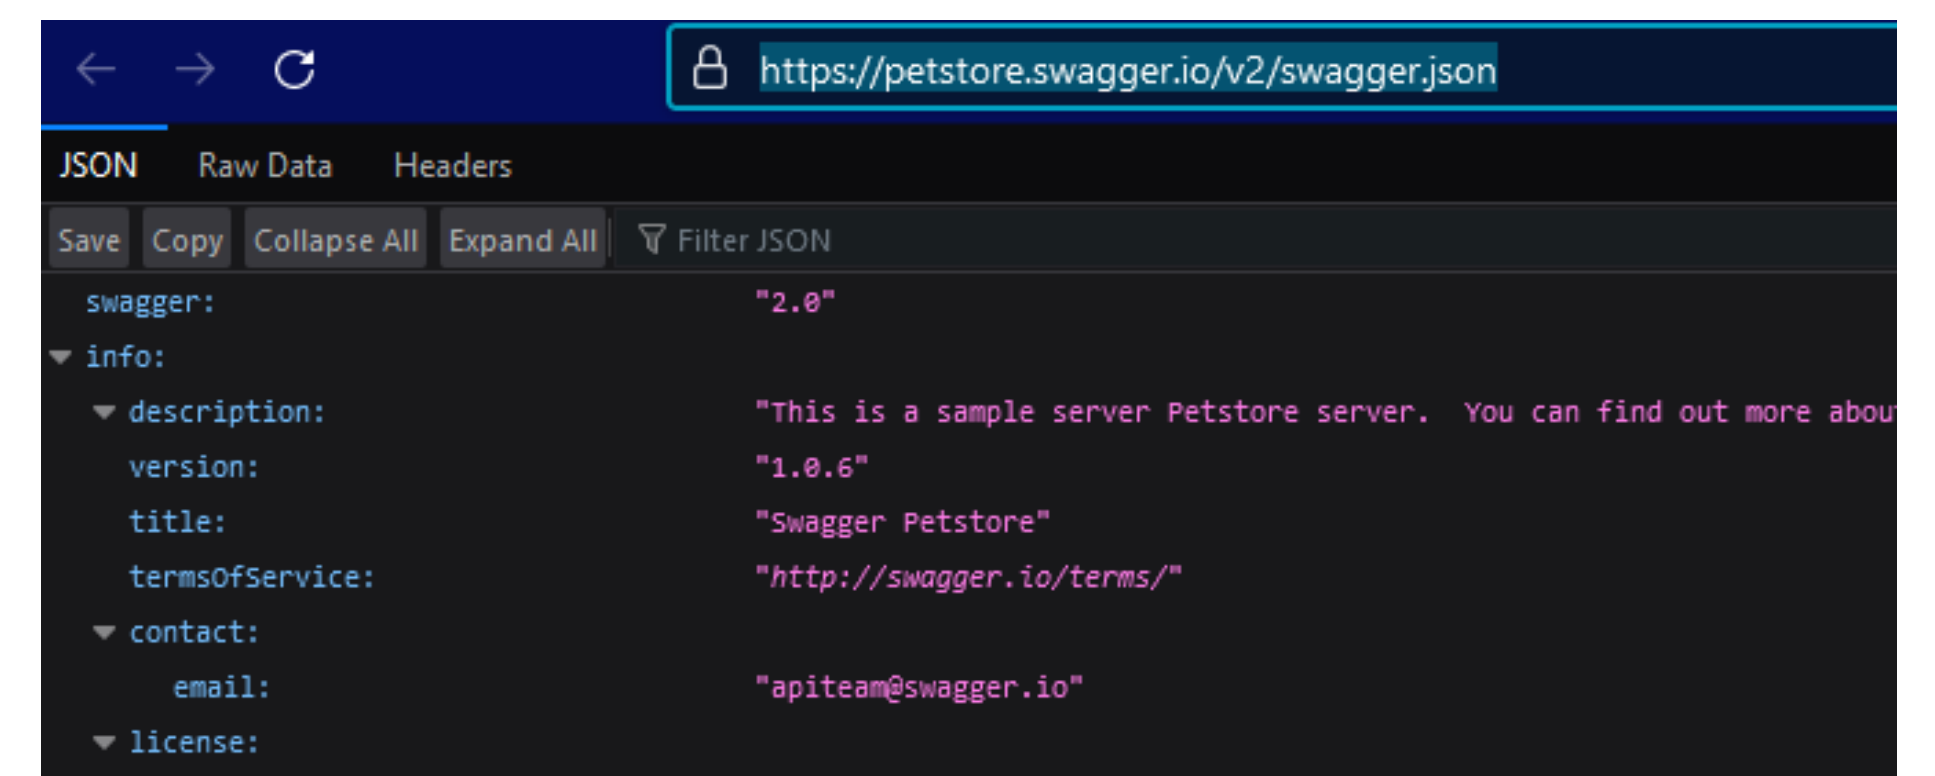

A

URL for Swagger Generation

<https://petstore.swagger.io/v2/swagger.json>

B

If you invoke the URL in a browser, you can verify in the JSON markup which version the sample swagger is. In this case we can see it is 2.0

```
swagger: "2.0"
info:
  description: "This is a sample server Petstore server. You can find out more about"
  version: "1.0.6"
  title: "Swagger Petstore"
  termsOfService: "http://swagger.io/terms/"
  contact:
    email: "apiteam@swagger.io"
  license:
```
