

01

It is important for consistency's sake to keep the same structure of your services in the API Manager. Going from V1 to V2 should have a semantic approach to make things easy for your subscribers.

02

As you can see below in the version option of the UI in the API Manager, we can easily update V1 to V2.

VERSION CHANGES

Adobe API Manager – Keeping the structure

API Name	Customer
Context	Customer
Version	v2
Visibility	Public
Logo	 <input type="button" value="Browse..."/> No file selected.
