

# COLDFUSION ADMIN

Configuring REST services in ColdFusion – Webservices

## ADD/EDIT REST Service 01

Select the service mapping name. In this tutorial we will call it “api”, and we will set it as the “default applications” and click on “Add Service”

Register your applications and folders. ColdFusion automatically registers CFCs found in the registered folders.

### Add/Edit REST Service

Root path

Browse Server

Application path or root folder where CFCs reside

Host [:Port]

Host name for the REST service(localhost is default). Example: localhost:8500 (Optional)

Service Mapping

Alternate string to be used for application name while calling REST service. (Optional)

Example: http://{Hostname}:{Port}/{REST Path}/{Service Mapping}/{Component REST Path}

Set as default application

Set an application as default to exclude the application name in the URL while calling the web service. One default application is allowed for a host.

Example http://{Hostname}:{Port}/{REST Path}/{Component REST Path}

Add Service
