

SAMPLE CODE

Configuring REST services in ColdFusion – Sample Code – DELETE Requests

SAMPLE CODE – DELETE – Script Based 01

To test the DELETE in Postman simply change the method option to DELETE and execute. You can see the message has returned and the customer has been updated.

```
//DELETE Request to remove a customer in the database
function delete () access="remote" returntype="string" produces="application/json" httpmethod="DELETE" {
    //do database delete and validation logic
    //return a successful message in the response
    var message = "Customer has been deleted.";
    return message;
}
```
