## Configuring REST in ColdFusion – Subresource Function

### SUBRESOURCES 01

The examples provided earlier are great starting points. At some point your APIs will most certainly evolve in complexity and logic. Having multiple Methods that are the same with respect to the httpMethod will cause conflicts if you don't properly identify which call routes to which function in your component.

In our earlier example we illustrated a simple get which returned all customers.

```
//GET Request to return customers
<cffunction name="get" access="remote" returnType="array" produces="application/json" httpmethod="GET">
    <cfset customers = arrayNew(1)>
    <cfset customers[1] = "Brian">
    <cfset customers[2] = "Caroline">
    <cfset customers[3] = "Noah">
    <cfset customers[4] = "Elijah">
    <cfset customers[5] = "Maverick">
    <cfreturn customers />
</cffunction>
```
