# MANAUAL CREATION

Adobe API Manager – Import REST from ColdFusion – API Manager Configurations

01

Hitting the import button should now automatically consume and create all your ColdFusion native REST API's for you in the Adobe API Manager. You are not required to enter any manual data for the import to work successfully.

02

If you used the sample code from the earlier parts of this session, you should now see the following UI displayed in the API Manager. These are the REST services that exist in the sample ColdFusion Components.
