# COLDFUSION ADMIN

Configuring REST services in ColdFusion - Webservices

**A**

## ADD/EDIT REST Service 01

Click on the Browse Server option and select the directory where your Rest Components will live. Earlier, we created the webservices directory in our ColdFusion root installation. Let's continue to use this for demo purposes.

Register your applications and folders. ColdFusion automatically registers CFCs found in the registered folders.

### Add/Edit REST Service

**Root path**

[                                    ]  Browse Server

Application path or root folder where CFCs reside

**Host [:Port]**

[                    ]

Host name for the REST service(localhost is default). Example: localhost:8500 (Optional)

**Service Mapping**

[                    ]

Alternate string to be used for application name while calling REST service.  (Optional)
Example: http://{Hostname}:{Port}/{REST Path}/{Service Mapping}/{Component REST Path}

**Set as default application**    ☐

Set an application as default to exclude the application name in the URL while calling the web service. One default application is allowed for a host.
Example http://{Hostname}:{Port}/{REST Path}/{Component REST Path}

Add Service
